Schedule Verification Report — Working Template

Project: AI Weekly Planner and Task Prioritiser
Status: Template only; no actual ChatGPT/Gemini/Claude outputs have been audited yet.

Purpose

Check whether each AI plan covers the task list, respects deadlines and capacity, avoids overlaps, includes breaks and identifies work that does not fit.

Required procedure

1. Run the same prompt and input in all three tools. 2. Preserve raw outputs. 3. Score using the 100-point scorecard. 4. Complete the checklist for each output. 5. Record every issue with evidence, severity and correction. 6. Verify the final calendar matches the selected plan.

Evidence fields to complete

Tool and model/version: _____ Date: _____
Checks performed: _____ Confirmed errors: _____
High severity: _____ Medium: _____ Low: _____

Error-rate rule

For a clearly defined check type, calculate confirmed errors ÷ checks performed × 100. State the denominator and avoid combining unlike checks. Do not fill in scores or errors until the raw output has been inspected.

Conclusion

[Complete after reviewing evidence. Explain which issues were corrected and what uncertainty remains.]
