AI Weekly Planner and Task Prioritiser

Project pack overview | CAPSTONE 33

This pack contains the requested project files and editable templates. It deliberately distinguishes sample inputs from real experimental evidence.

Required outputs included

- 25-task list and spreadsheet tracker
- Three AI output capture templates and weighted scorecard
- Provisional day-level plan and Google Calendar import template
- One-week completion log
- One-page weekly template (PDF + DOCX)
- Prompt library
- Schedule verification checklist and report template
- Before/after analysis template
- Editable final demo slides and speaker notes
- Project execution guide and final report template

Important: Real AI outputs, one-week completion results and baseline comparison cannot honestly be prefilled before you run the tools and complete the experiment. These fields are left blank intentionally.
